## Animal Interaction & Immobilisation Safaris

### Involved animal interaction

Clients are afforded the opportunity to be involved in wildlife darting and management procedures. Various species such as rhino, cheetah, elephant, lion, and many more, that need darting for management or conservation reasons such as pregnancy monitoring or contraception, health checks, transmitter implants or collar fitment, are darted by a wildlife Veterinarian in order for the procedure to be carried out.

Clients are given the opportunity to participate in the procedure being carried out once the animal is tranquillised and it is safe to move closer. Depending on the species and procedure involved, clients will have the option of a hands-on approach, or, if they prefer, simply observing from up close and getting those pictures of a lifetime....all under the guidance of an experienced wildlife Veterinarian. Clients fees help cover the costs of the procedure, thus benefitting wildlife conservation.
