Green it Forward

Plant

contribute to growth

Few people realise the enormous contribution they could make to nature conservation and society simply by planting indigenous plants. Plants form the basis of any ecosystem. If this base is removed, the whole food chain collapses.

The only way to dovetail social development with nature conservation, is the incorporation of extensive gardens of indigenous plants.

Indigenous plants bring the poignant beauty of our natural areas into anywhere that they are put into the ground.

The variety of garden wildlife they attract provide additional intellectual stimulation and educational value to the societies into which they are introduced.

It would not be an exaggeration to say that by giving someone an indigenous tree, you are giving a living gift, and an investment in our biosphere that continues to grow.

Planting indigenous is consequently the most effective way of adding value to your contribution to the battle against global warming.
